

Build DAGs Using the Taskflow API in Apache Airflow

Building DAGs Using the Taskflow API

Janani Ravi

Co-founder, Loonycorn

www.loonycorn.com

System and Software Requirements

MacOS or Linux (Debian/Ubuntu) machine (can run WSL on Windows)

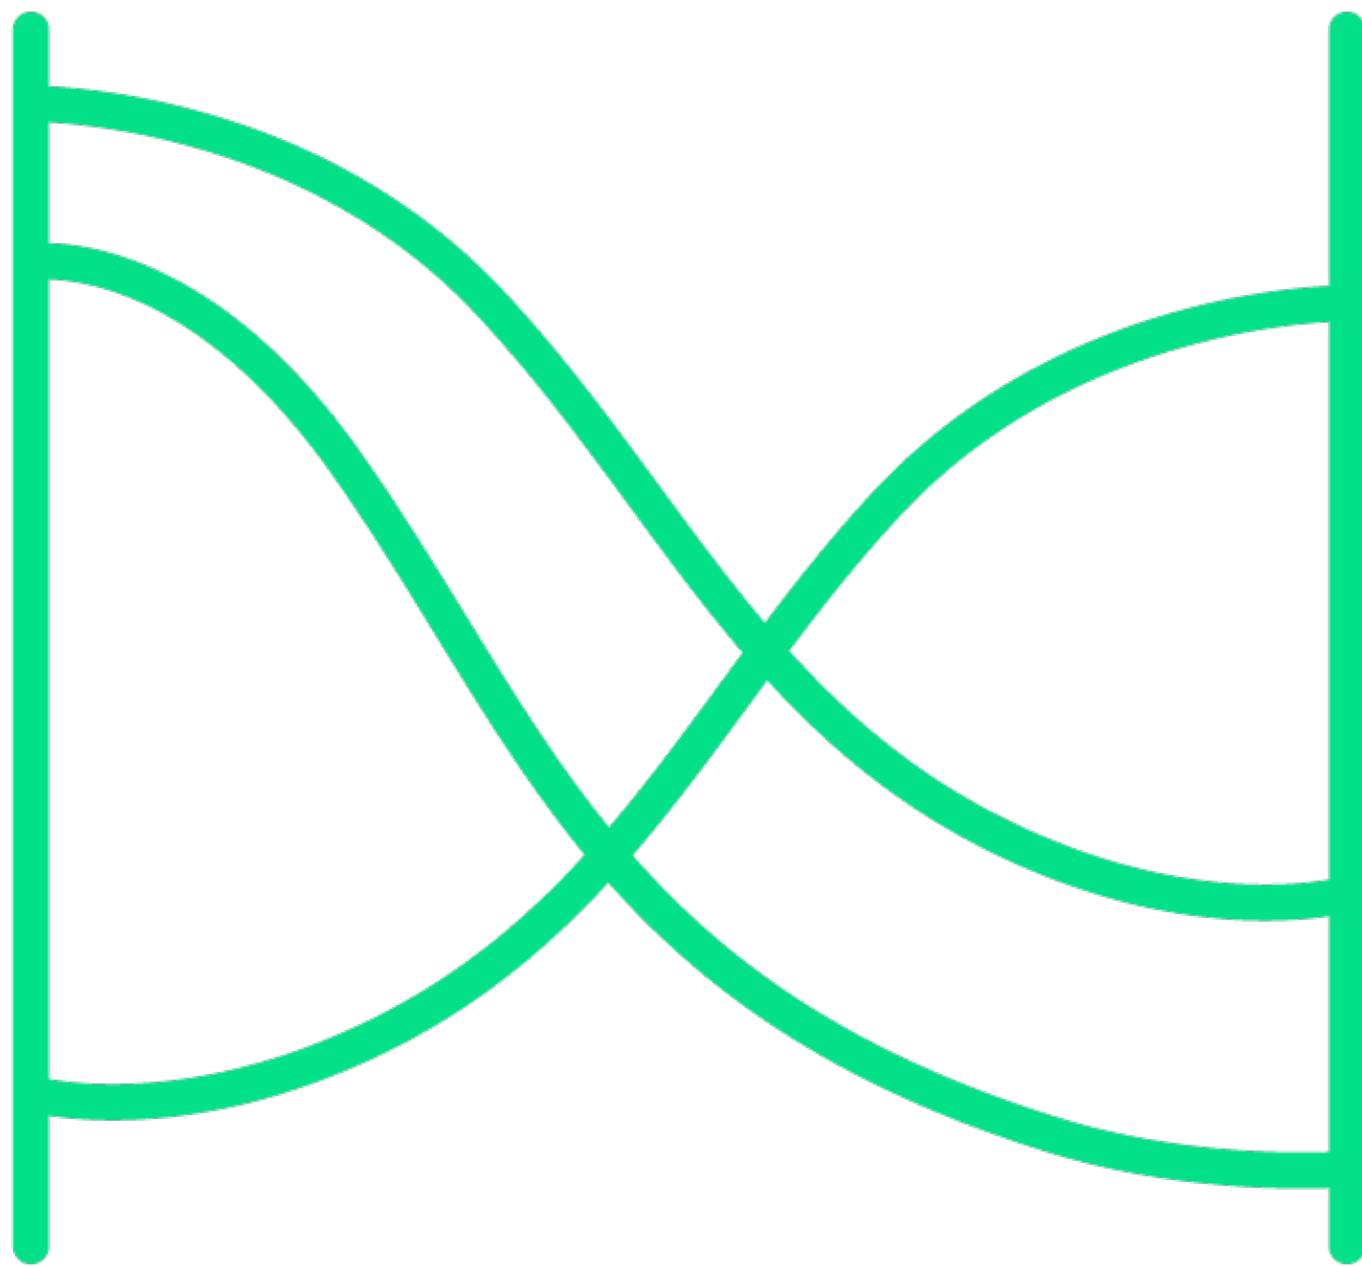

Python 3.8+ (needed for newer versions of Airflow)

Apache Airflow 2.9.2

Taskflow API

Define tasks using standard Python functions

Straightforward to pass data between tasks

Improves readability and structure of DAG
